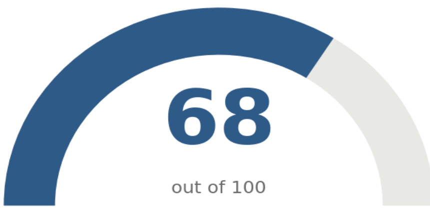
AI READINESS DIAGNOSTIC

Prepared for Acme Bank

Sarah Chen · Banking & Retail Banking · April 2026

AI Selective — Quick Wins, Build Strategically



AI is the right lens for parts of your business — not all of it. The winning move is targeted: pursue 2–3 high-feasibility quick wins while investing in the capability gaps that hold you back from larger plays.

INDUSTRY ARCHETYPE

Data Factory
AI is the product. Defend or die.

Your industry runs on information. Competitors with better AI will out-price, out-target, and out-detect you. AI is no longer optional — it is the substrate of competition.

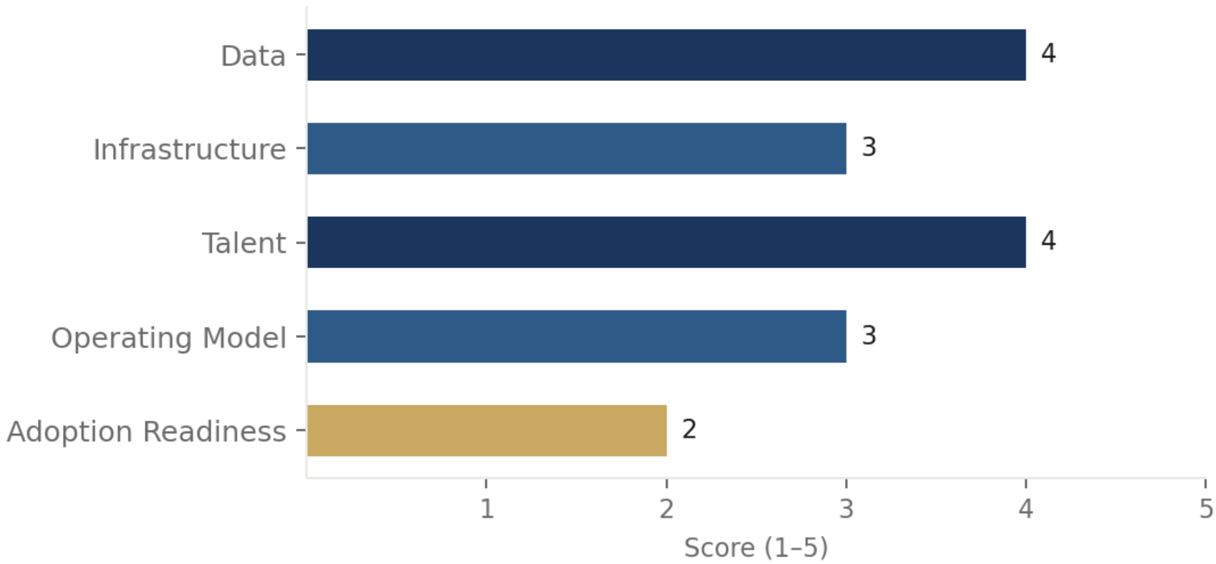
Stage-by-Stage Readiness

Your composite score is a weighted average of five strategic questions. Scoring each stage separately reveals the specific lever to pull next.

	Stage	Score	Read
1	**WHY — Strategic Imperative**	**90.0**	Strong
2	**WHERE — Value Pools**	**79.2**	Strong
3	**WHAT — Use Case Fit**	**75.0**	Strong
4	**HOW — Capability Stack**	**46.0**	Developing
5	**SO WHAT — ROI Outlook**	**61.5**	Solid

Capability Stack Diagnostic

The capability stack determines whether AI investment will land. Your weakest layer caps the entire stack — you cannot exceed your bottleneck.



Your bottleneck: Adoption Readiness. Closing this gap is the single highest-leverage move before scaling AI investment further.

Value Pools at Stake

Where in your business is AI value most concentrated? These are the areas to focus first — not because they're easiest, but because they represent the largest prize.

Rank	Value Pool	Stake
1	Customer Acquisition & Marketing	High
2	Pricing & Revenue Management	High
3	Risk, Fraud & Compliance	High
4	Internal Analytics & Decision Support	High
5	Customer Service & Support	Medium

Recommended Use Cases

Based on your archetype (Data Factory) and your scoring, these use cases offer the strongest combination of strategic value and feasibility for your business right now.

01 **Fraud detection & AML monitoring**
Strategic fit score: 4/5

02 **Credit & underwriting models**
Strategic fit score: 4/5

03 **Personalization & next-best-action**
Strategic fit score: 4/5

Risks to Manage

- Regulatory scrutiny on model decisions
- Model governance & audit trails
- Bias, fairness & explainability

ROI Outlook (18-Month Horizon)

Indicative figures based on your inputs and archetype benchmarks. Real engagements refine these with your actual cost base, baseline metrics, and capture-rate assumptions.

Annual Revenue	**$2.5B**
AI Value at Stake	**8.0% of revenue · $200.0M**
Capture Rate (18-mo)	**30%**
Captured Value	**$60.0M**
AI Investment	**$25.0M**
Net Value	**$35.0M**
ROI Multiple	**2.4×**
Payback	**8 months**

Note: These figures assume disciplined execution and exclude one-time transformation costs. The single biggest variable is capture rate, which is determined by your operating model and adoption — not by the AI itself.

Recommended Next Steps

01 Scope two high-feasibility use cases with payback under 12 months.

02 Address your weakest capability layer before scaling further.

03 Defer high-value, low-feasibility bets until foundations are stronger.

Your First Move

A use-case portfolio review across fraud, credit, and personalization — these compound fastest in your archetype.
